Sri Soumya Narasimhadevara

Senior Lead Full-Stack Engineer

PROFESSIONAL SUMMARY:

• Senior Full-Stack Engineer with **11+ years of experience** designing and delivering scalable enterprise web applications using **React, Next.js, Node.js, and TypeScript**.

• Strong expertise in building **API-driven platforms, internal operational dashboards, and secure enterprise systems** across banking, healthcare, and financial services domains.

• Experienced in **REST API development, OAuth/JWT authentication, and microservices architectures**, ensuring secure and reliable backend services.

• Proficient in **automated API testing and quality validation using Postman, Jest, and modern testing frameworks** to improve system reliability and performance.

• Skilled in developing **modular frontend architectures and reusable UI components**, delivering responsive and high-performance user experiences.

• Hands-on experience with **CI/CD pipelines, Git-based workflows, and cloud-based deployments**, enabling efficient and reliable application delivery.

• Collaborative professional with experience working in **Agile/Scrum environments**, partnering with cross-functional teams to deliver scalable and business-impacting solutions.

TECHNICAL SKILLS:

Web Technologies, Cloud and Container skills	HTML 5, CSS3, Bootstrap, JavaScript, AJAX, JSON, JS, NodeJS, ReactJS, NextJS, REST, GraphQL, Babel, Webpack, Gulp JS, Grunt JS, Karma, Jasmine, Mocha, SpringBoot, Kubernetes, Docker, AWS, Azure and GCP
Servers	Apache Tomcat, MongoDB
Database	PostgreSQL, MySQL, NoSQL, MongoDB.
Development Tools	Eclipse, IntelliJ, NetBeans, Visual Studio.
Version Control Software	GitHub, Gitlab, Azure Repos.
Programming Languages	JavaScript, Typescript, Golang, Python, Ruby (Rails).
Testing tools	Postman, Jest, Mocha, Chai, Playwright, Cypress
Operating system	MacOS, Windows, Linux.

CERTIFICATIONS:

- **AWS Certified Cloud Practitioner**
- **C# Certified .NET Core Services Developer**
- **React Developer Certification**
- **Talend Certification**

PROFESSIONAL EXPERIENCE:

Deutsche Bank, Jacksonville, FL
Sr. Lead React/Node JS Engineer **Mar 2024 – Till Date**

Domain: Banking – Transaction Monitoring & Risk Operations Platform

Project: Internal Transaction Monitoring & Operations Dashboard

Developed an **internal enterprise platform used by banking operations and risk teams to monitor transaction alerts, investigate anomalies, and analyze operational workflows across multiple banking systems.**

The system supported internal analysts responsible for reviewing financial transaction alerts, identifying potential fraud signals, and maintaining operational compliance across banking services.

Responsibilities:

• Led development of **full-stack applications using React, Next.js, TypeScript, Node.js, and Nest.js**, building responsive dashboards for monitoring transaction alerts and operational metrics.

• Designed **modular and reusable UI components** following modern frontend architecture patterns, enabling analysts to visualize alerts, transaction data, and investigation workflows.

• Developed and integrated **REST APIs using Node.js and Nest.js**, connecting multiple internal banking services and transaction data sources.

• Implemented **secure authentication and role-based access control using OAuth and JWT**, ensuring compliance with enterprise banking security standards.

• Improved **API reliability and data validation** through automated testing using **Postman, Jest, and Mocha**.

• Used **Dynatrace monitoring dashboards** to analyze application performance, API latency, and infrastructure health.

• Collaborated with **operations teams, QA engineers, and business stakeholders** to enhance investigation workflows and operational efficiency.

• Supported **CI/CD pipelines using Git and Jenkins**, improving build automation and deployment reliability.

• Designed APIs and dashboards supporting **high-volume transaction monitoring across multiple banking systems**.

• **Mentored junior engineers and conducted code reviews**, ensuring adherence to coding standards and architecture guidelines.

Results:

• Improved **visibility into transaction alerts and operational metrics** for banking operations teams.

• Reduced investigation time for alerts through **enhanced dashboards and optimized data access workflows**.

• Increased **backend service reliability and monitoring coverage** through automated API testing and performance monitoring.

Elevance Health, Indianapolis, IN **Mar 2021 – Feb 2024**
Sr. React.js/Node.js Engineer

Domain: Healthcare – Member Services & Claims Management Platform

Project: Healthcare Member Portal & Claims Analytics Platform

Developed a **secure healthcare member portal used by patients, providers, and internal operations teams to manage healthcare plans, track insurance claims, and access medical service information.**

The platform supported **digital healthcare services such as claims tracking, eligibility verification, provider search, and benefits management**, improving accessibility to healthcare services for members and providers.

Responsibilities:

• Developed **full-stack web applications using React, Next.js, TypeScript, and Node.js**, building responsive dashboards for healthcare members to track claims and benefits.

• Built and integrated **REST APIs using Node.js and Express/Nest.js** to connect healthcare data services, claims systems, and provider network services.

• Implemented **secure authentication and authorization using OAuth and JWT**, ensuring HIPAA-compliant access to sensitive healthcare data.

• Designed and optimized **database queries using PostgreSQL and MongoDB** to support healthcare claims processing and reporting workflows.

• Developed **mobile-friendly interfaces and responsive UI components**, improving accessibility across desktop and mobile devices.

• Implemented **automated API testing using Postman and Jest** to improve stability of healthcare services.

• Worked closely with **product managers, QA teams, and healthcare business stakeholders** to deliver new features and improve system usability.

Results:

• Improved **digital access to healthcare claims and benefits information** for members and providers.

• Increased **system reliability and performance of healthcare APIs** through improved testing and monitoring practices.

Sanofi, Cambridge, MA **Jan 2020 – Feb 2021**
MERN Developer

Domain: Pharmaceutical Research – Scientific Data Analytics Platform

Project: Scientific Research Data Visualization & Analytics Platform

Developed an internal analytics platform used by pharmaceutical research teams to analyze biological datasets, visualize experimental results, and support drug research workflows.

The system enabled research scientists to explore large datasets, identify relationships between biological entities, and visualize research outcomes through interactive dashboards.

Responsibilities:

• Built interactive dashboards using React, Next.js, and TypeScript enabling researchers to visualize experimental datasets and analytics results.

• Developed backend APIs using Node.js to process research datasets and support analytics workflows.

• Implemented graph-based data exploration using Neo4j and data visualization tools such as D3.js, enabling researchers to identify relationships between research data entities.

• Designed microservices architecture using Node.js and containerized deployments using Docker and Kubernetes, supporting scalable data analytics services.

• Collaborated with data scientists and research teams to improve visualization capabilities and support data analysis workflows.

• Implemented CI/CD pipelines and automated testing, ensuring stable deployments of research analytics services.

Results:

• Enabled faster analysis of scientific datasets through interactive visualization dashboards.

• Improved collaboration between research teams by providing centralized analytics and data visualization tools.

Blackstone, New York, NY **Jul 2016 – Dec 2019**
Full Stack Developer

Domain: Financial Services – Investment Portfolio Analytics Platform

Project: Portfolio Analytics & Investment Monitoring Platform

Developed an **internal portfolio monitoring and analytics platform used by treasury and investment teams to track portfolio performance, risk exposure, and financial metrics across multiple investment funds.**

The application supported **investment analysis, reporting, and operational monitoring of portfolio assets for internal financial teams.**

Responsibilities:

• Built **React-based dashboards enabling analysts to visualize portfolio performance, investment metrics, and financial reports.**

• Developed **Node.js REST APIs to retrieve and process financial portfolio data from internal financial systems.**

• Implemented **secure authentication mechanisms and role-based access controls** to protect sensitive financial information.

• Designed **data models and optimized database queries using PostgreSQL and MongoDB** to support financial reporting workflows.

• Developed **mobile-friendly dashboards using React Native**, enabling portfolio teams to access analytics data remotely.

• Implemented **automated testing and CI/CD pipelines**, improving release stability and deployment consistency.

Results:

• Improved **visibility into portfolio performance and financial metrics** for treasury and investment teams.

• Enabled **faster access to financial reporting data** through improved analytics dashboards.

Evercore, New York, NY **Jan 2015 – Jun 2016**
UI/UX Developer

Domain: Investment Banking – Deal Analytics & Advisory Reporting

Project: Investment Banking Deal Analytics Dashboard

Developed an **internal financial analytics platform used by investment banking analysts to monitor deal data, market analytics, and financial transaction metrics across advisory engagements.**

The system enabled analysts to **visualize financial trends, analyze deal performance, and generate reporting insights for mergers, acquisitions, and advisory projects.**

Responsibilities:

• Built **interactive dashboards using AngularJS and Vue.js** enabling analysts to visualize deal analytics and financial transaction data.

• Developed **Node.js backend services and REST APIs** supporting financial data retrieval and analytics features.

• Implemented **data visualization using D3.js** to display financial trends and market analytics.

• Designed **responsive UI components using HTML5, CSS3, and JavaScript** ensuring cross-device compatibility.

• Conducted **API testing using Mocha and Chai**, ensuring stable backend services for analytics dashboards.

Results:

• Improved **data accessibility and visualization of financial analytics** for investment banking analysts.

• Enhanced usability and reporting capabilities of internal advisory analytics platforms.

EDUCATION:

University of North Texas – Master's in Computer Science
2014 – 2016

Amrita University – Bachelor's in Computer Science
2010 – 2014
